

POLYCARBONATE ROLLER SHUTTERS

STRONG AS STEEL - CLEAR AS GLASS

A high security transparent roller shutter system made from polycarbonate. Tough, durable & transparent, it is ideal where the convenience and security of a roller shutter is required - together with unparalleled visibility, and more than a touch of class.

Benefits

- ◆ The highest visibility of any roller shutter
- ◆ Strong as a steel shutter
- ◆ Won't scratch, crack or break under normal use
- ◆ 100% UV stabilised polycarbonate retains its clear transparency for many years
- ◆ Virtually silent in operation
- ◆ Self-supporting – no structural work needed
- ◆ Green credentials – 100% recyclable
- ◆ Superior fire-resisting properties, being almost non-flammable and self-extinguishing

Construction & Operation

Panels are manufactured from a patented transparent polycarbonate plate material which, after several machining steps, forms a 6mm roll-up panel.

The curtain is enclosed in a self-contained frame of extruded aluminium rails which requires only minimal lateral support and no further structural engineering or steelwork.

Operation is via a single phase 230V internal tubular motor and several switching options are available. The roll-off safety device comes standard.

Size range

Doors have minimum and maximum heights of 1,000mm and 5,000mm, and a maximum single-span width of 6,000mm. Wider curtains are joined by an H-section (with a visible width of 15 mm).

Quality & service

The doors have been tested to 11,000 cycles, equating to around 15 years' normal use. Installation and maintenance services are available nationwide.

Applications

- ◆ Shopping Mall
- ◆ Airports
- ◆ 24 Hour Banking Areas
- ◆ Car Showrooms
- ◆ Department stores, particularly concessions within department stores
- ◆ Domestic dwellings, night-time lockdown
- ◆ Street kiosks
